

Lab - 9

Task 1

Identify the problems in the **Orders_Unnormalized** table.

Task 2: Convert to 1NF

Transform the table into **First Normal Form (1NF)**.

Requirements:

- Remove repeating groups
- Ensure atomic attributes
- Define a proper primary key

Task 3: Convert to 2NF

Transform the 1NF design into **Second Normal Form (2NF)**.

Requirements:

- Remove partial dependencies
- Separate customer and product data

Task 4: Convert to 3NF

Transform the 2NF design into **Third Normal Form (3NF)**.

Requirements:

- Remove transitive dependencies
- Separate payment data if necessary

Task 5

List anomalies present in the unnormalized design:

- Insert anomaly
- Update anomaly
- Delete anomaly
