

# Mobile Application Development Quiz 1

## Question 1 (4)

This is a good thing

The left side figure has some square boxes. **With a brief explanation determine the value of justifyContent and alignItems when flexDirection is column.**

Following image has the code snippet for the left side structure.

```
const App = () => {  
  return (  
    <View style={styles.container}>  
      <Text>This is a good thing</Text>  
      <View style={styles.box1}></View>  
      <View style={styles.box2}></View>  
      <View style={styles.box3}></View>  
    </View>  
  );  
}
```

## Question 2 (6)

Define the following three terms with examples,

- 1) Asynchronous Programming,
- 2) Setup function of useEffect,
- 3) Conditional Rendering of React Native.

## Question 3 (5)

We know a parent communicates with its child using prop. Explain how children communicate with their parents within 5 steps.

## Question 4 (2+4+5+5)

- 1) If division is 2 then what would be the range of age?

```
const division = (age >= 18) ? 1 : 2;  
console.log(division);
```

- 2) With a brief explanation discuss the difference between the output of the following switch statement if id equals to 6 for a scenario and 9 for another scenario.

```
switch (true){
  case (id%2)===0:
    console.log('id is even');
    break;
  case (id%3)===0:
    console.log('id is multiple of 3');
  case (id%2) !== 0:
    console.log('id is odd');
    break;
  default:
    console.log('id is nothing of the above');
}
```

- 3) What is wrong with the following code snippet? Discuss the issue with timestamp.

```
useEffect(() => {
  const timer = setInterval(() => {
    setTimers(timers.map(timer => {
      if(timer.isRunning === true){
        return {
          ...timer,
          elapsed : timer.elapsed + TIME_INTERVAL
        }
      }
    })
    return timer
  })
}, TIME_INTERVAL);

// return () => clearInterval(timer);
}, [timers]);
```

4)

**ghor musi**  
Home

**00:00:00**

Edit

Remove

Start

Swap ????? with the appropriate values in the following code snippet to get the left side output.

```

const Timer = ({
  id,title,
  project,elapsed,
  isRunning,
  onEditFormOpen,
  ?????,
  onToggleRunning
}) => {
  const elapsedString = millisecondsToHuman(elapsed);

  return (
    <View style={styles.timerContainer}>
      <Text style={styles.title}>{title}</Text>
      <Text>{project}</Text>
      <Text style={styles.elapsedTime}>{?????}</Text>
      <View style={styles.buttonGroup}>
        <TimerButton color="blue" small title="?????" onPress={onEditFormOpen}/>
        <TimerButton color="?????" small title="Remove" onPress={() => onRemove(id)}/>
      </View>
      <TimerButton
        color="#21BA45"
        title={isRunning ? "?????":"Start"}
        onPress={() => onToggleRunning(id)}
      />
    </View>
  )
}

```

## Question 5 (3+3+3+5)

- 1) Define the state criteria.
- 2) Discuss the difference between state and prop.
- 3) Write the output of the following code.

```

const names = ['atiq','shafin','rahman','edon','jafrin','alin']

console.log(names.filter( (nm) => nm.length >= 6 ))

```

- 4) State the difference between VAR and LET keywords, visualize the dissimilarities with stack procedure.
