

CSE 4643: Mobile Application Development

Quiz 2 Marks 15 Duration 15 minutes

- 1) What to do if a component doesn't show up? (2)
- 2) Describe a scenario where we need to use dynamic style? (1)
- 3) Mention one difference between Text and View built-in react native components. (1)
- 4) Mention any one Text props? (1)
- 5) Mention one minor inconvenience with both TouchableOpacity and TouchableHighlight? (1)
- 6) Let's assume a View Containing 1718x123 has the following style object as its style prop. (2)

```
{  
  marginTop : 22,  
  marginBottom : 40,  
  padding : 17,  
  borderTop : 18,  
  paddingRight : 67,  
  border : 10,  
  margin : 50  
}
```

Find the actual height and width of the View.

- 7) Explain two processes with code to include images in an app. (2)
- 8) What does aspectRatio:2 means as a style prop for an Image component. (1)
- 9) How can I render a simple shape like a circle? (1)
- 10) Illustrate difference between row and row-reverse value for flex-direction prop. (2)
- 11) Explain why opacity animation is extremely smooth and the interaction is low latency. (1)
