1 Check Whether a Number is Positive, Negative, or Zero

This script demonstrates the use of conditional statements to classify a number based on its sign.

1.1 Algorithm

1. Start the program.
2. Read the value of n .
3. If $n > 0$, display "The number is positive."
4. Else if $n < 0$, display "The number is negative."
5. Else, display "The number is zero."

2 Calculate the Sum of First N Natural Numbers

This script demonstrates the use of loops and arithmetic operations to calculate the sum of the first N natural numbers.

2.1 Algorithm

1. Start the program.
2. Read the value of n .
3. Initialize $sum=0$ and $i=1$.
4. Repeat while $i \leq n$:
 - (a) $sum = sum + i$.
 - (b) Increment $i = i + 1$.
5. Display the final value of sum .
