

Quiz # 01 (1)

Course Title: Microprocessors and Assembly Language

Total Marks: 15

Course ID: CSE – 4503

Time: 25 Mins.

Student Id:

Obtained Marks:

-
- Q1.** Using 8085, explain the fetching operation of an 8-bit data from a memory location of 1001h. **02**
- Q2.** Let's consider that in 8086 the stack is empty. If AX=A1B2h and BX=FF11h, then show the swap operation of AX and BX using both stack operations and instruction usage. **04**
- Q3.** Suppose, Instruction Pointer (IP) of 8086 is moving in forward memory directions for executing following assembly language codes: **09**

Memory Address	Assembly Language
10001h	MOV AL, 1Ah
10003h	NOT AL
10005h	ADD AL, A1h

After executing of all arithmetic and logical instructions in a single run with enabling interrupt, what values can be in AL and Flag (CF, PF, AF, ZF, SF, OF, IF, TF, and DF) registers?

.....
