

Solution:

1. **Name the 4 types of CSS combinators. For each combinator, give an example showing how it can be used.**

Answer:

There are four different combinators in CSS:

- ☐ Descendant combinator (space)
- ☐ Child combinator (>)
- ☐ Next sibling combinator (+)
- ☐ Subsequent-sibling combinator (~)

```
<div class="parent">
  <p>p1</p>
  <span>
    <p>p2</p>
  </span>
</div>
<p>p3</p>
<h2> h2 tag </h2>
<p>p4</p>
```

```
.parent p {
  color: red; /*p1,p2 will be red*/
}
```

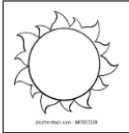

```
.parent > p {
  color: blue; /*p1 will be blue*/
}
```

```
div + p {
  color: green; /*only p3 will be green */
}
```

```
div ~ p {
  color: purple; /*both p3,p4 will be purple*/
}
```

2. Only write the necessary Javascript code to add the image.

--	--

Answer:

```
const imageSection = document.createElement('section');

// Heading
const imageHeading = document.createElement('h2');
imageHeading.textContent = 'Image Section';
imageSection.appendChild(imageHeading);

// Image
const img = document.createElement('img');
img.src = 'image.jpg';
img.alt = 'Description of the image';
imageSection.appendChild(img);

// Contact section
const contactSection = document.querySelector('#contact');

// Insert image section before contact section
contactSection.parentNode.insertBefore(imageSection, contactSection);
```
