

Lab 2

Practice Problems Related to PL/SQL

CSE 4508
RELATIONAL DATABASE MANAGEMENT SYSTEM LAB

November 27, 2025, Winter 24–25

1 Tasks

Task 1

Write an anonymous PL/SQL block that takes an integer `n` and checks whether `n` is a perfect number or not. A number is called perfect if it is equal to the sum of all its positive divisors excluding itself (for example, 6 and 28). The block should print ‘`Perfect`’ if the number is perfect, otherwise print ‘`Not Perfect`’.

Task 2

Write a PL/SQL procedure called `odd_even_counter` that takes two integers `start_val` and `end_val` as input (with `start_val ≤ end_val`). The procedure will:

- Count how many odd numbers and how many even numbers are in the range `[start_val, end_val]`.
- Print the total count of odd numbers and the total count of even numbers.

Assume that `start_val` and `end_val` are both integers.
